team Project (tP)

CS2103DE

tP Group

- Your team project group is within your tutorial group. (Switching is not allowed)
- Attending tutorials is mandatory for your progress of tP.

Grading

- tP worths 25 marks.
  - 2 marks come from tutorial attendance.
  - 18 marks come from your team's total contribution.
  - 5 marks will be based on your individual contributions. (As long as you complete your allocated features within your team. You will get full mark)

- Detailed grading Rubric will be uploaded to Canvas in week 6.

tP

- tP is a **greenfield project**. i.e. you propose a new project and deliver Minimum Viable Product (MVP).

Minimum Viable Product(MVP)

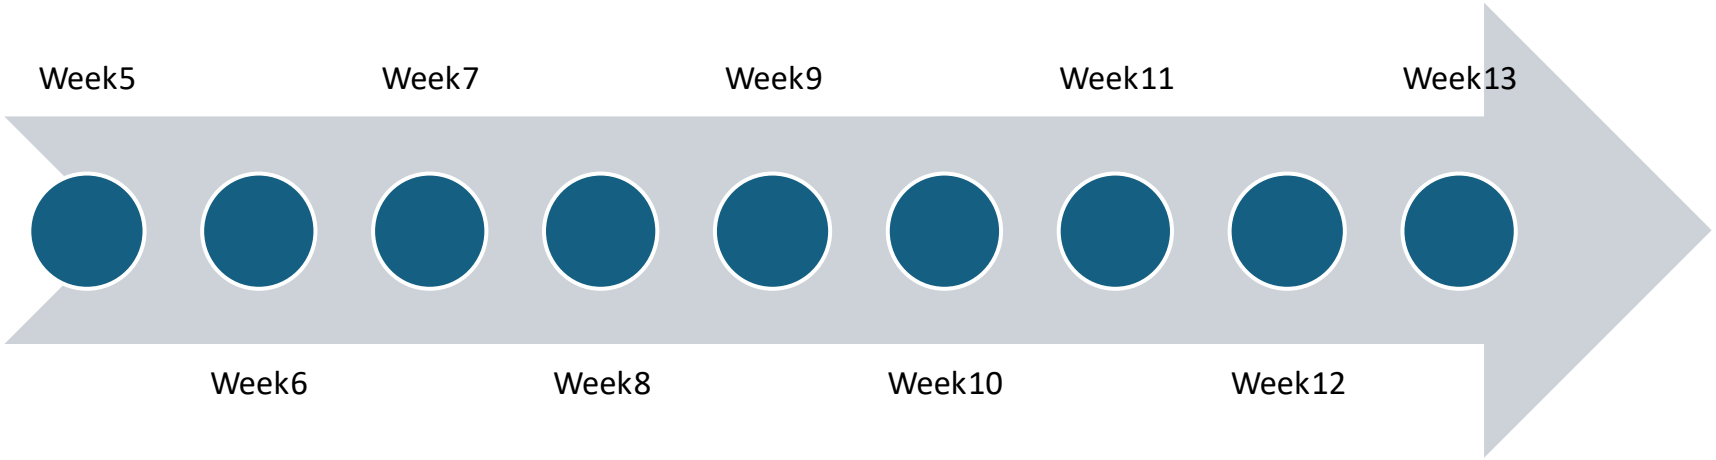
A Minimum Viable Product (MVP) is a basic version of a product that has just enough core features to be usable by early adopters.

The goal of an MVP is to test the product idea with minimal effort and cost, allowing teams to collect feedback quickly before investing heavily in full-scale development.

Learning Objectives of tP

1. Coding
2. Working in a team
3. Process/workflow
4. Documentation
5. Scheduling and tracking project progress, meeting delivery deadline
6. Quality assurance

Project Timeline



Week 5 (This week)

- **Objective**: Lay the groundwork for the project.

- **Tasks**:
  - Team formation and role assignments.
  - Project kick-off meeting to discuss goals and responsibilities. (Set up weekly meetings)
  - Set up communication channels and weekly meetings.
  - Identify key stakeholders and define high-level project scope.

Week 6-7

- **Objective**: Understand and document project requirements.

- **Tasks**:
  - Conduct stakeholder interviews to gather needs.
  - Develop user stories and define functional/non-functional requirements.
  - Prioritize user stories for MVP.
  - Create an initial product roadmap.

- Focus – **Do “just enough work”**.

Week 8 (Iteration 1) – Practice Iteration→ V1.1

- **Learning outcome**: Able to follow the workflow as a team.
- **Product goal**: Create and maintain documents for your project. (Documents include Product Requirements Document (PRD), Software Design Document(SDD), API Documentation and System Architecture Diagrams)
- **Strategy**: Practice the workflow while updating the documents.

Week 9 (Iteration 2) – First Feature Increment → V1.2

- **Learning outcome**: Able to update functional code while working in parallel.

- **Product goal**: Take the first step towards an MVP by delivering at least *some* functionality changes.

- **Strategy**: Define the smallest possible MVP (simplest versions of *must-have* features only). Each member tries to merge at least one PR that moves the product towards that MVP.

Week 10 (Iteration 3) – Add more Features→ V1.3

- **Learning outcome**: Able to deliver a fully working product, on time.
- **Product goal**: Reach the MVP
- **Strategy**: Decide on a plan to meet the MVP delivery deadline.
  Reduce risk by aiming for the smallest subset of must-have features.

Week 11 (Iteration 4) – Release Alpha Version→V1.4

- **Learning outcome**: Able to tweak the product/project plan to match the available time/resources.

- **Product goal**: Implement fully-fledged versions of *all* the features intended for final release.

- **Strategy**: Add features based on priority, while maintaining a working product. It is OK if the features are rough around the edges, as they can be tweaked in the next iteration.

Week 12 (Iteration 5) – Release Candidate(RC)→ V1.5

- **Learning outcome**: Able to apply internal quality control.
- **Product goal**: Reach the *release candidate (RC)* version, ready for a public beta testing (i.e., the product quality should be sufficiently high e.g., no obvious bugs).
- **Strategy**: Do an alpha test internally, and refine features as necessary. Improve tests, documentation, and code quality.

Week 13 (Iteration 6) – Public Release→ V1.6

- **Learning outcome**: Able to put in final touches while minimizing delivery risks i.e., risks of regressions or deadline overruns.
- **Product goal**: Reach the quality necessary for a public release.
- **Strategy**: Freeze features. Strictly limit changes to bug fixes only.

Deliverables

- A project demo video of 10 minutes (maximum).

- ~~Project Report which includes your workflow throughout the project and the product.~~ User Guide(UG) and Developer Guide(DG).

- A workable JAR – (Java Archive File) with the instructions to run.

Thank You
